

Henrik Agner

Solution architect / Tech lead / Senior fullstack developer

Henrik is a highly experienced Solution Architect, Tech Lead, and Senior Full-Stack Developer with extensive expertise in leading technical teams and driving successful projects. With over 12 years of experience and a passion for modern technologies and platforms, he excels in designing and implementing innovative solutions that ensure high performance, scalability, and efficiency. He is a natural leader who thrives in dynamic environments, with expertise spanning cloud platforms, full-stack development, and solution architecture.

Henrik is highly comfortable with web development, system development, architecture, and technical leadership across both frontend and backend.

Senior Fullstack developer

SEB Pension och Försäkring

Henrik works as a Senior Backend Developer in a .NET team at SEB P&F, which is undergoing a transformation to future-proof its core insurance solutions. In this role, he contributes to the development of new solutions around the core Lumera system to increase business flexibility and enable smooth integrations. The initial focus is on developing a system for managing powers of attorney.

Senior Fullstack developer

Storstockholms Brandförsvar

Henrik works as a senior software developer at Storstockholm Brandförsvar, covering regions such as Stockholm County, Gotland, Mälardalen, Södermanland, and Uppsala. The system is designed to support fire chiefs in resource planning and managing personnel and equipment, including vehicles, boats, fire trucks, and dogs. It is built in .NET with Blazor and hosted on Microsoft Azure.

Henrik is responsible for maintaining the system, ensuring it remains stable, updated, and aligned with operational needs. His work includes both technical maintenance and further development, optimizing functionality, performance, and security. By continuously improving and adapting the system, he contributes to more efficient resource planning and enhanced operational readiness for Storstockholm Brandförsvar.

Lösningssarkitekt / .NET utvecklare

Questback Sweden AB

Henrik works as a solution architect and developer, tasked with assessing future development needs and providing guidance to modernize the architecture of the company's core product. Questback is a leading provider of feedback and survey platforms that help businesses collect and analyze data to drive improvements and increase engagement. Questbacks solutions are used worldwide to gain insights into customer and employee experiences.

In his role at Questback, Henrik is responsible for designing and developing secure, scalable integration services and APIs that enable users to seamlessly interact with the Questback products. He specializes in building RESTful JSON APIs using C# and .NET Core, focusing on security and performance by implementing modern authentication and authorization methods such as OAuth2 and JWT via Zitadel IdP. Henrik documents APIs in detail following OpenAPI specifications, using tools like Swagger and Scalar, making it easier for external partners to integrate Questback solutions. He also builds automated tests to ensure high performance and reliability of the APIs.

With his experience in distributed systems, message queues, and SaaS and microservices architectures, Henrik contributes to creating flexible and scalable solutions capable of handling large volumes of data and complex integrations, supporting Questbacks business goals and enhancing the platform for future growth.

mar. 2020 - oct. 2024

Tech Lead

Keystone Education Group

As Tech Lead, Henrik played a key role in supporting multiple technical platforms within the companys portfolio. He was responsible for leading development teams, ensuring high code quality, and driving architecture and integration projects. The work was evenly split between frontend and backend development.

Frontend: HTML, CSS, SASS, JavaScript, TypeScript, React.js, Tailwind CSS, ASP.NET, Next.js, Headless CMS, Sanity CMS, Microfrontend Architecture, Firebase Cloud Firestore, JestJS, Vercel, Git, GitHub Actions, AWS CloudFront, Google Cloud

Backend: C#, .NET Core, PHP, Java, Python, Spring Boot, Django, FastAPI, Node.js, REST, GraphQL, RabbitMQ, OAuth, SAML, IAM, Entity Framework

Responsibilities:

- Led development teams to deliver high-quality solutions on time
- Defined architectural principles and implemented design patterns for scalable systems
- Conducted technical discussions with stakeholders and optimized system performance
- Integrated with external systems such as CRM and billing platforms
- Recruited and mentored new developers, managing their onboarding
- Collaborated closely with product management and the leadership team
- Designed, developed, and customized both backend and frontend components

sep. 2018 - mar. 2020

Lead developer

Keystone Education Group

Henrik advanced to the role of Lead Developer, responsible for the development of the Student Recruitment System (SRS), a CRM platform for universities and colleges. He led the design and implementation of features across both frontend and backend, managed integrations, and supported junior developers through mentorship and code reviews. The work was split roughly 50/50 between frontend and backend development.

Frontend: JavaScript, TypeScript, Angular, AngularJS, Vue, React

Backend: ASP.NET, C# / .NET Core, Node.js, Entity Framework, Microsoft SQL Server, PostgreSQL, Redis, RabbitMQ, SQS, SNS, AWS Lambda, Docker containers, Dependency Injection, Amazon S3, AWS Batch, SES

Achievements:

- Implemented key features that improved user engagement and scalability
- Collaborated with product management to ensure technical solutions aligned with business needs
- Introduced code reviews and continuous integration to enhance code quality
- Designed, developed, and customized both frontend and backend components

Fullstack developer

Keystone Education Group

Henrik worked as a full-stack .NET developer, primarily responsible for developing and maintaining the SRS platform. In this role, he handled both frontend and backend development, using technologies such as C# / .NET, JavaScript, ASP.NET, and AngularJS to build a scalable and user-friendly application.

He was also responsible for integrating the platform with AWS, ensuring smooth system operations, and using PostgreSQL as the database. Working in an agile environment, he contributed to continuous improvements and the development of a structured, efficient recruitment platform for the education sector.

Fullstack developer

IDSS AB

The iServ platform from IDSS collects and processes data, primarily from telecom networks, to transform it into relevant information for business users.

Henrik started by developing backend processes in C++ and later moved into full-stack development, focusing on C# / .NET and JavaScript. He built a scalable web application that allowed users to visualize data through various tools and dashboards. He also developed an Android app for monitoring and managing alerts related to IDSS services.

The work involved both front-end and back-end development, roughly split 50/50.

Technical Specialist Infrastructure

Tieto AB

Henrik served as a technical infrastructure specialist at Tieto. In this role, he managed client installations for Tietos many customers and addressed issues arising in their environments. His responsibilities included SCCM configuration, Active Directory (AD) and DNS management, and troubleshooting application packages. He also built automation solutions using C# / .NET and C++.

2010 - 2013

Teknisk Specialist Infrastruktur & Support

Ericsson AB

Acted as a remote support specialist, performing in-depth troubleshooting on client systems for Ericsson. Tasks included resolving individual user issues using tools such as Sysinternals and WinDbg for memory dump analysis. For problems affecting multiple users, he developed custom scripts or small applications, mainly in C# or C++.

He held a leading role in a project with Intel during 2011 and 2013 to implement Intels vPro technology within Ericssons account, serving as a technical specialist responsible for research, testing, and scripting to deploy the technology in Sweden as a pilot.
